(54) Title: **AUTOMATIC ASSIGNMENT OF A NETWORK ID**

(57) Abstract: For the automatic assignment of an identification (SSID2) which designates a network (1), network server means (3) and access means (4) connected to these network server means are used, wherein the access means (4) are set up for communication with at least one network client (6) and the network server means (3) are operated to generate a network (1) which is defined by a provisional, preset identification (SSID1) which is known to the network client (6), and wherein a communication is made between the network server means (3) and the network client (6) via the access means (4), and the network server means (3) send to the network client (6) a new identification (SSID2) which they have generated, which is used for final designation of the network (1).
